

## **IN THE SPECIFICATION**

Please replace paragraph [0116] with the following amended paragraph:

--[0116] When it is determined at step S1 that the coding picture type is the I-picture, the controller 185 is supplied with parameter information from the parameter input unit 187 at step S2 and determines whether or not the phase of a macro block in previous coding agrees with the phase of a macro block of present coding referring to the information showing the phases of the macro blocks included in the parameter information (for example, information similar to v\_phase and ~~p\_phase~~h\_phase in SMPTE 329M). When it is determined at step S2 that the phase of the macro block in the previous coding does not agree with that of the present coding, the processing goes to step S7 to be described later. --

Please replace paragraph [0142] with the following amended paragraph:

--[0142] When it is determined at step S21 that the coding picture type is the I-picture, the controller 215 is supplied with parameter information from the parameter input unit 187 at step S22 and determines whether or not the phase of a macro block in previous coding agrees with that of a macro block of present coding referring to the information showing the phase of the macro blocks included in the parameter information (for example, information similar to v\_phase and ~~p\_phase~~h\_phase in SMPTE 329M). When it is determined at step S22 that the phase of the macro block in the previous coding does not agree with that of the present coding, the processing goes to step S28 to be described later.--

*REMAINDER OF PAGE LEFT INTENTIONALLY BLANK*
